Company Announcement

Gujarat Fluorochemicals Limited (GFL) is pleased to announce that we are compliant with the proposed emission limits of non-polymeric PFAS to air and water during fluoropolymer manufacturing, as outlined in the updated background document of Annex XV dossier on Per- and polyfluoroalkyl substances (PFASs) restriction proposal under EU REACH, dated 24th June 2025.

The proposed emission limits for non-polymeric PFAS residues from polymerization aid technology in fluoropolymer manufacturing are:

- i. **Until end of 2030:** 0.0090% to air, 0.0010% to water
- ii. **From end of 2030 onwards:** 0.0030% to air, 0.0006% to water

As a responsible manufacturer of fluoropolymers, GFL has invested in state-of-the-art abatement technologies, rigorous monitoring systems and continuous process improvements to minimise PFAS emissions to the environment.

Through these measures, **GFL confirms compliance with the proposed 2030 onward non-polymeric PFAS emission limits from fluoropolymer manufacturing under EU PFAS restriction proposal.**
